Autocomplete Wizard | WordPress Plugin

version 1.2.1

Autocomplete Wizard plugin helps your users find what they are looking for better and faster. No more searching in the dark, no more 404 errors! Autocomplete your content and redirect your users.

The shortcode adds a dropdown SELECT field with automatic redirection, based on user selection. The function does not interfere with the native search form and can be placed anywhere in a post or a page. The plugin works with jQuery1.9+ and 2.0+.

The search form redirects to any chosen post, page, category or tag and does not generate any search pages using GET requests (in other words, the /?s=query is not possible).

If you are not using the post editor, you can place the shortcode directly inside your PHP template, using this code:

```php
<?php
echo do_shortcode('[your-shortcode-here]');
?>
```

Features

- Seamless integration with WordPress styles (the integrated stylesheet works both for light themes and dark themes
- HTML5 compatible/valid

Installation

1. Upload the **autocomplete-wizard** folder to your '/wp-content/plugins/' directory
2. Activate the plugin via the Plugins menu in WordPress
3. Review the options and set the labels (Settings -> Autocomplete Wizard)
